▣ Profile

Poetic soul | Emerging ritualist | Conscious technologist-in-transition | Engineer of systems, steward of silence

I'm a systems thinker, quiet builder, and poet in migration. With over a decade of experience in backend engineering, DevOps practices, and scripting, my path has become more than technical — it's an apprenticeship with meaning. I don't just write code; I tend it like a garden — with the same care I give to silence and verse.

I build where clarity meets calm. Software, like soul-work, should be both resilient and graceful. My ideal teams value inner alignment, thoughtful iteration, and collective wellbeing, where engineering is not just efficient — but expressive, ethical, and soul-aware.

What drives me is not just outcomes, but orientation. My best work arises at the edge: where robustness meets presence, speed meets symbolism, and systems meet soul.

🌐 Soul-Tech Summary

With 10+ years in development and DevOps, I am a tech artisan called to contribute where values guide velocity. Where movement is with attention, calibration, and quiet stewardship. My engineering toolkit includes Golang, Bash, Python, Docker, and infrastructure-as-code practices. But beyond syntax, my work carries pulse. I often write poetry — exploring the tension between stillness and velocity.

My contribution weaves clean engineering with deep listening — shaping infrastructure that uplifts, not just operates. I seek soul-aligned ecosystems: teams that respect the invisible, design with dignity, and solve not just for scale — but for soul.

⚙️ Core Strengths

- Deep Listening · Reflective Writing · Poetic Craft
- Archetypal Recognition · Narrative & Symbolic Design
- Systemic Thinking · Human Centered Frameworks
- Golang · Shell Scripting · Python
- Terraform · GitLab CI/CD · Jenkins
- Structured Planning · Analytical Execution
- Excellent Communication · Emotional Intelligence

Technical Toolkit

- Languages: Go (Golang), Shell, Python, basic Java, C/C++
- DevOps Tools: Terraform, GitLab, Jenkins, Consul, JIRA
- Databases: SQL & NoSQL
- Practices: Version-controlled scripting, automation with awareness, fault-tolerant systems

Professional Experience

Senior Software Engineer / DevOps Specialist

Various Organizations | 2013 – Present

- Designed and deployed resilient backend services using Go
- Architected infra-as-code pipelines with Terraform and Jenkins
- Led automation for diagnostics and tooling
- Fostered clarity in collaboration and code — with presence, not pressure

Self-Initiated Practice (2019 – Present)

- 200+ poetic fragments across themes of longing, karma, myth
- Certification in Comparative Mythology, Mumbai University
- Symbolism, Vedic cosmology, and astrological archetypes
- Active pivot toward soul-tech work with contemplative engineering ethos

Creative Portfolio

Poetry & Language as Ritual

A contemplative practice rooted in rhythm, nuance, and unseen architecture.

Samples

*To fade, is fate inevitable
To be fully lit, my longing ineffable*

*Brevity is my companion
I shall not know exaggeration*

*Either you fit the bill,
Or you face extradition drill...
In this world full of frills,
One has to swallow the pressure pill
.....*
